Introduction

Senior Web3 and Full-Stack Engineer specializing in blockchain-based gaming systems and scalable web applications.

Proven experience in architecting and delivering end-to-end Web3 products on Solana, including handling large-scale NFT datasets, optimizing on-chain/off-chain interactions and building high-performance user interfaces.

Strong background in system architecture, performance optimization and leading engineering teams in production environments.

Experience

Longwood Labs – CTO

Feb 2024 – Present

- Leading development of a Web3 game [Defi Dungeons](#) built on Solana, owning system architecture across frontend, backend and blockchain integration
- Designed and implemented NFT-based game mechanics, including minting, ownership logic and in-game asset interactions
- Built scalable systems for handling large NFT datasets (10k+ assets) with optimized fetching and rendering
- Architected efficient on-chain/off-chain interaction patterns to reduce latency and improve user experience
- Integrated with Solana ecosystem tools (Metaplex)
- Manage and mentor a team of 3 developers, ensuring efficient collaboration and delivery.
- Responsible for strategic technical decision-making and project management

Longwood Labs – Software Engineer

Feb 2023 – Feb 2024

- Developed core features for Web3 game [Heist game](#) across both frontend and backend.
- Implemented NFT-related features including asset fetching, display and interaction
- Optimized performance for large-scale NFT rendering and data handling
- Contributed to system design and performance improvements

Blank Development – Software Engineer

Dec 2022 – Feb 2023

- Designed and implemented full-stack features using Next.js and NestJS for NFT collection management tools.
- Proposed solutions improving code architecture and resolved critical UI issues.

Maurer Electronics GmbH

Dec 2021 – Dec 2022

- Developed backend systems and internal tools
- Built authentication and authorization systems
- Led internal project development and CI/CD setup

Education

FESB, University of Split

Master's Degree (2022-2025)

FESB, University of Split

Bachelor's Degree (2018 – 2022)

Core Skills & Tools

Web3

- Solana, Metaplex, Token 2022
- NFT systems and asset management
- On-chain / off-chain architecture
- Wallet integrations and blockchain data handling

Frontend

- React.js, Next.js and TypeScript
- Component architecture and performance optimization (data-heavy UI)
- Animations (GSAP)

Backend

- Node.js, NestJS
- API design and data handling

Database

- PostgreSQL, Prisma
- Query optimization and data modeling
- Database-level logic (triggers, stored procedures)

Devops

- Docker, CI/CD
- AWS, Vercel, Railway

- Monitoring and performance analysis (Grafana)
